#### LED Replacement Lamps.

One of the biggest concerns amongst ralliers is that of power consumption and will the battery last the duration of the rally. Not so much of a problem in the lighter spring and summer periods when the trusty solar panel comes into its own but a real concern during the autumn and winter when caravan lighting puts more of a strain on the battery. Many of the newer vans are now being equipped with LED lights that offer far lower current consumption to their halogen equivalents. I have now equipped a number of my lamps with LED version bulbs and I am very pleased with the results. The LED lamps used were supplied by Leisurepower Ltd based in Warrington, Cheshire. They can offer a wide range of LED lamp options to cover such variants as MR11, MR16, G4, Festoon and Strip light. Whilst the initial outlay is more than for conventional lamps the life expectancy is far longer coupled to power consumption a third to fifth of halogen bulbs. Leisurepower Ltd will offer discounts of 10% for quantities over 10 lamps, so getting together with your friends with an order will save you money.
