

ADVICE FOR USE OF ELECTRIC TEA URNS

The SCCC Equipment Officer has received a number of questions about the safety and use of our electric Tea Urns.

- Electric Tea Urns are typically used indoors and must be sited next to a fixed 13A electric socket.
- Electric Tea Urns have 3kW or 15 to 20 Amp power requirement.
- The use of extension leads is NOT advised.
- Marshals should NOT attempt to use electric tea urns on electric hook-up or where temporary power points are installed, unless specifically advised by a qualified electrician.
